## 1 Requirement elicitation

### 1.1 Objectives

- Build a chat application according to the communication protocols defined by each group, using the TCP/IP protocols.

### 1.2 Stakeholders (Actors)

- User

### 1.3 User stories

- As a user, I want to log in, so that I can log into the system
- As a user, I want to have a online list, so that I can know who are online
- As a user, I want to search using a username, so that I can find friend
- As a user, I want to view my friends list, so that I can start a chat with my friend
- As a user, I want to send and receive messages, so that I can chat with my friend
- As a user, I want to send file during chat, so that I can send the file in real time

### 1.4 Functional and non-functional requirements

#### 1.4.1 Functional requirements

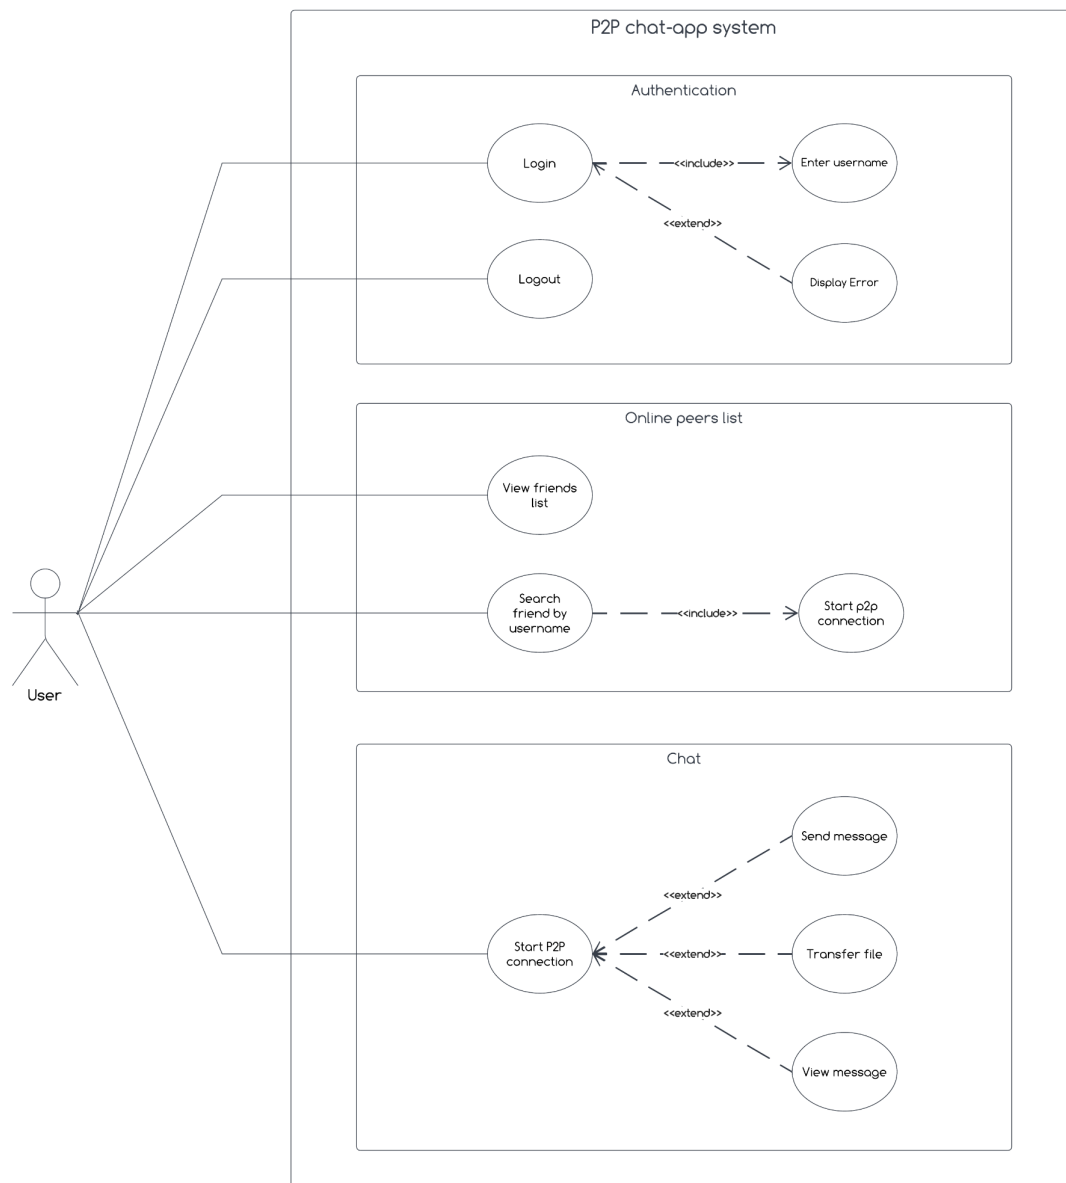

- Be able to manage personal account on the system (log in)
- Be able to search for a friends by his/her username
- Be able to add friends who have created an account on the system to friends list
- Be able to view list of friends
- Be able to directly send text messages in real-time and peer-to-peer with friends
- Be able to transfer file during chat session

#### 1.4.2 Non-functional requirements

<b>Performance</b>	<ul style="list-style-type: none"><li>- The application should have a response time of less than 2 second.</li><li>- The messages should be sent and received in a real-time manner with a delay of less than 1 second.</li><li>- System response time must be less than 1 second.</li></ul>
--------------------	--

	<ul style="list-style-type: none"><li>- Be able to handle feedback from 100 users concurrently.</li></ul>
<b>Ease of use</b>	<ul style="list-style-type: none"><li>- Be able to get used to using the application without any prior experience with about 5 minutes of initial using.</li><li>- The language for the application should be English.</li></ul>
<b>Reliabilities</b>	<ul style="list-style-type: none"><li>- The system must operate 24/7.</li><li>- The average number of failable real-time access to the system is 2 out of 1000 access times.</li></ul>
<b>Security</b>	<ul style="list-style-type: none"><li>- System grants access just when user log in with correct password and username</li><li>- Using peer-to-peer chat to protect your privacy</li></ul>

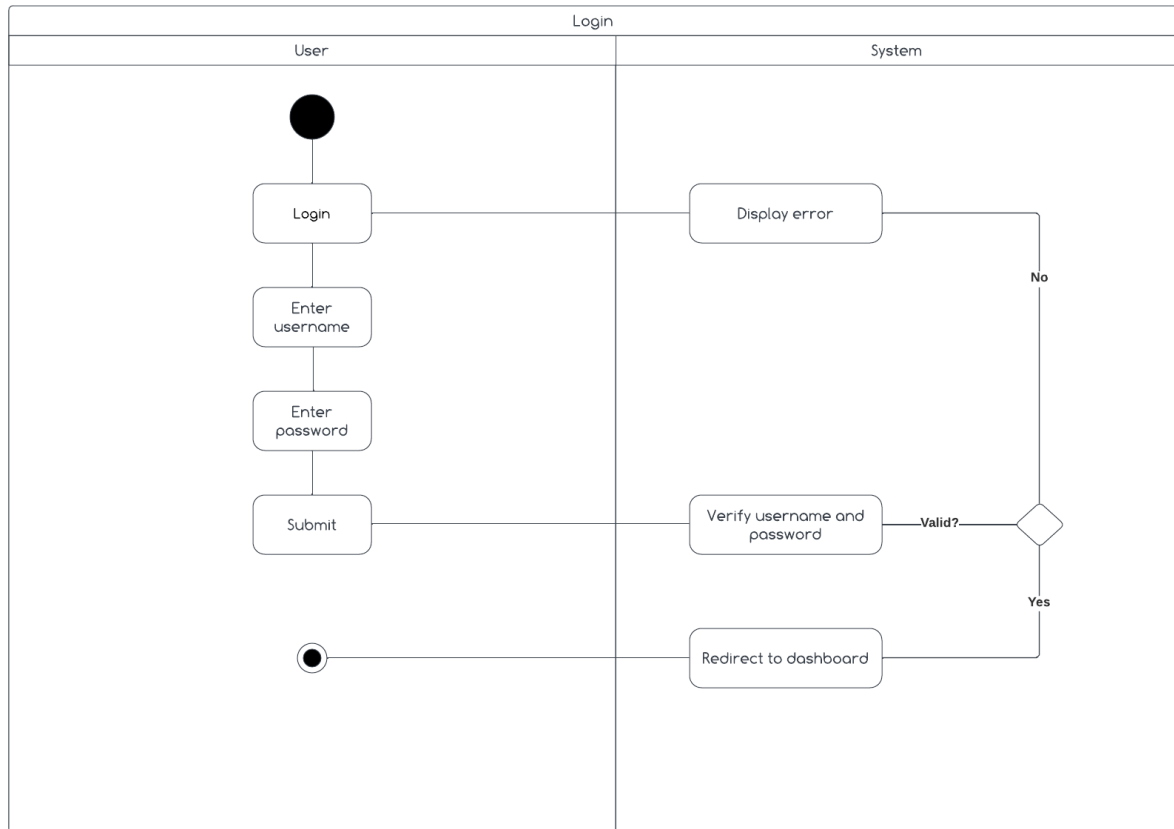

## 1.5 Use-case diagram

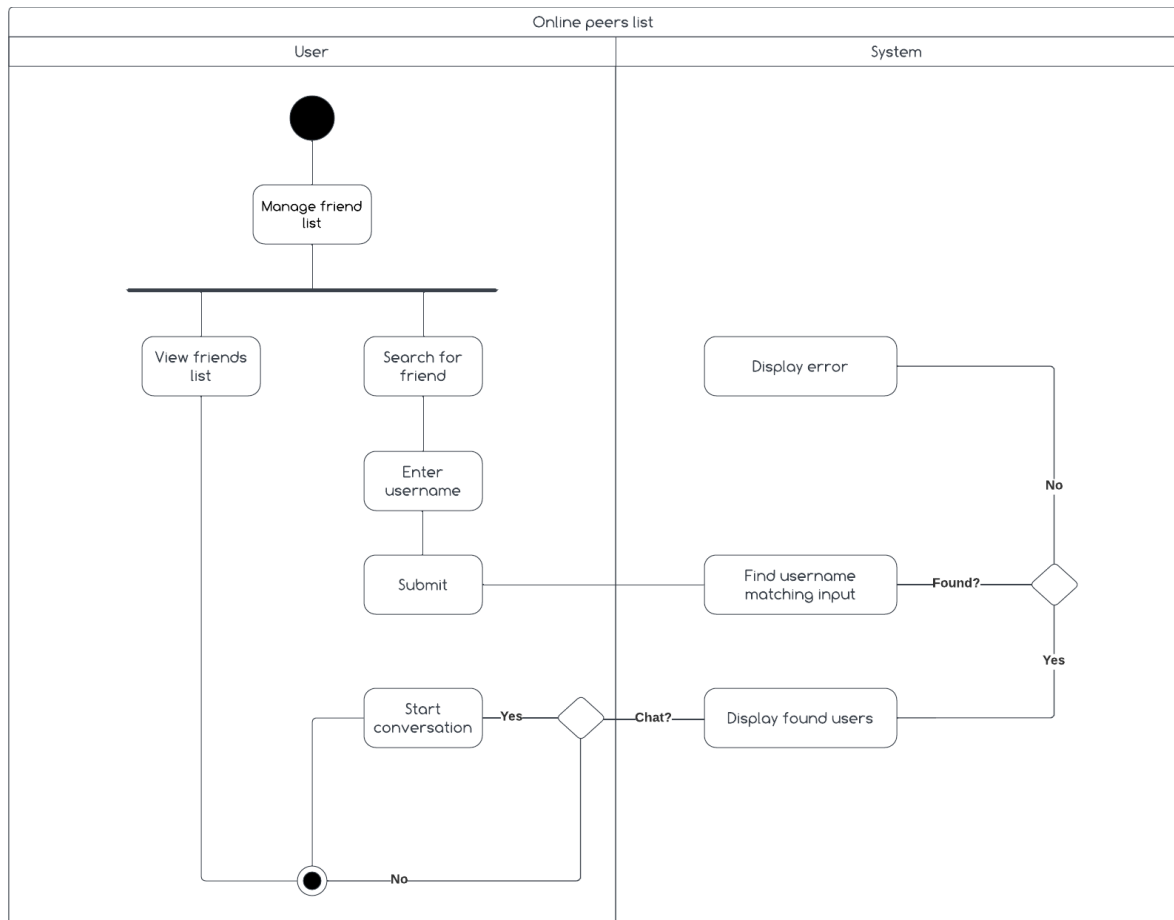

## 2 Application design

### 2.1 Activity diagrams

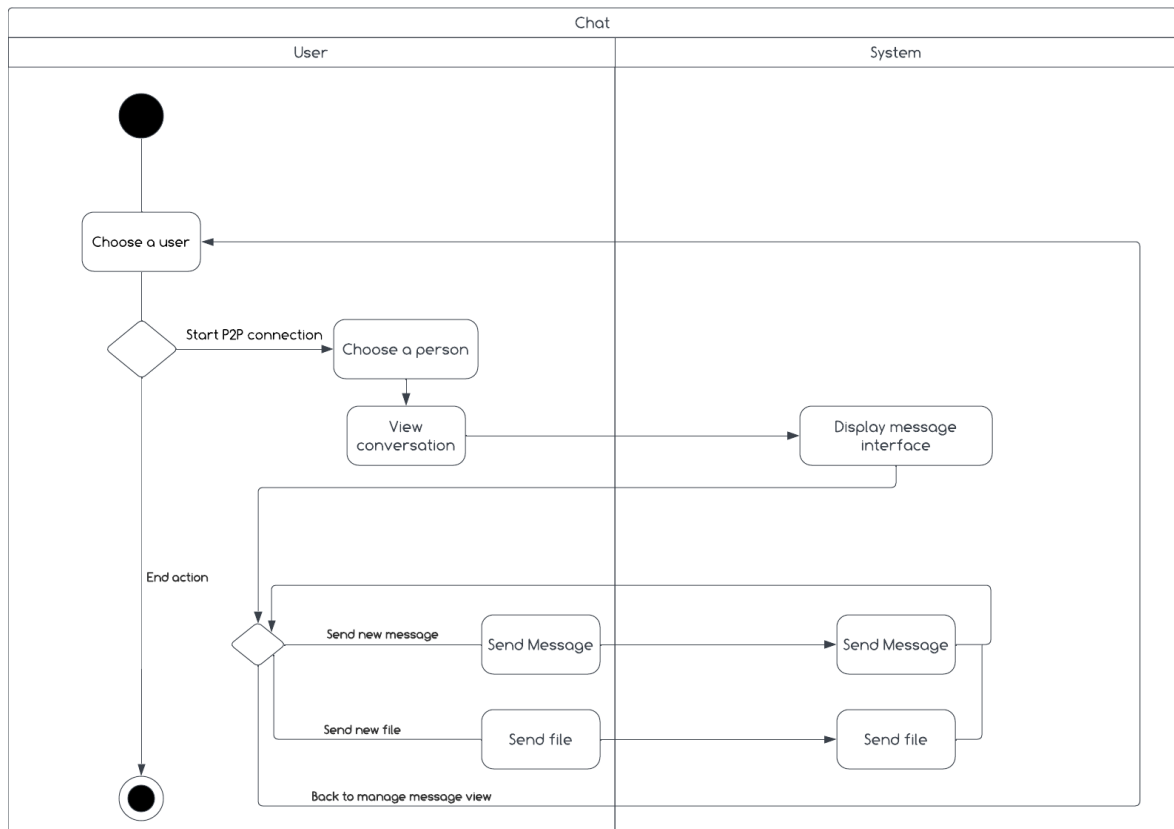

#### 2.1.1 Login

### 2.1.2 Online peers list

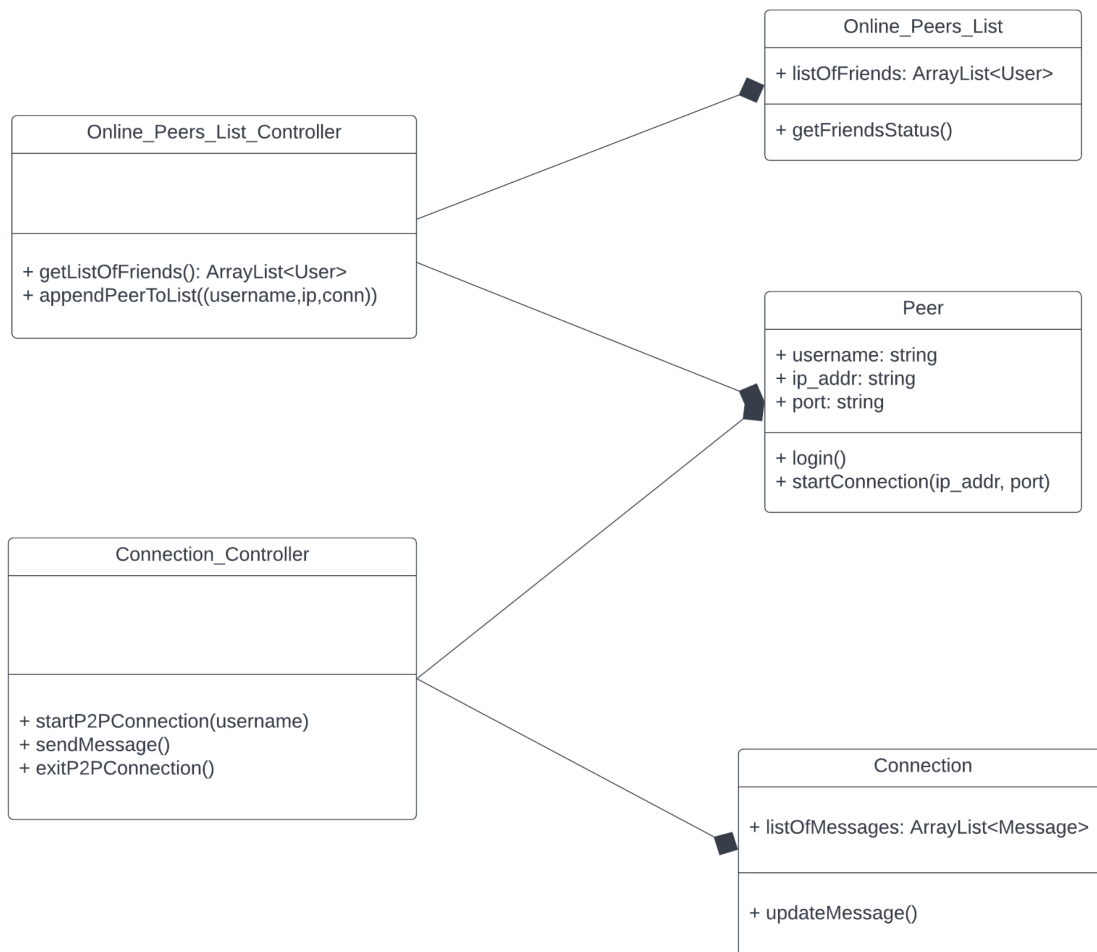

### 2.1.3 Chat

## 2.2 Class diagram

## 2.3 Protocol

This app uses TCP as its primary protocol.
